D-Link's New Routers Will Make Your Home Wi-Fi One Smooth, Seamless Network Capable of Connecting Almost Anything

New routers include features such as Wi-Fi 6, and all routers will feature D-Link Wi-Fi Mesh plus enhanced parental controls

FOUNTAIN VALLEY, Calif. – January 3, 2020 – With the announcement of its new mesh Wi-Fi router and range extender lineups, D-Link has accelerated the adoption of next-generation Wi-Fi with flexible, affordable, future-ready solutions. The global networking company announced new products all running mesh Wi-Fi ahead of the Wi-Fi Alliance's release of Wi-Fi EasyMesh® technology, with some of the routers also incorporating the new Wi-Fi 6 standard. With this new technology, all D-Link routers and range extenders will work seamlessly with other products using the same technology to make Wi-Fi more efficient.

"Most people don't want to fuss with their Wi-Fi. They want to grab a router, set it up, and go," said Rayan Fakhro, product line manager, consumer solutions, D-Link Systems. "Our new routers use D-Link Wi-Fi Mesh to remove issues with compatibility while providing the bandwidth and processing needed to reduce congestion and increase efficiency. They also include new enhanced profile-based parental controls that are easy to set up."

The enhanced parental controls include an interactive, tap-and-set interface that enables parents to create profiles for each member of their family. From there, they can add devices under and set schedules.

Other features will include WPA3™ encryption support, BSS coloring, voice compatibility with Alexa and Google Assistant, IFTTT integration, and access to support, including chat, through the D-Link Wi-Fi app.
